

Director of Engineering - Shipyard - Seattle, WA

Are you looking to step up and manage the engineering functions for a shipyard with a focus on newbuilds? We're looking an experienced Senior Naval Architect with fabrication or shipyard experience to manage the engineering departments for our client.

Responsibilities will include:

- Leading the Engineering departments including all staff
- Lead the design and engineering teams to accomplish the company goals for newbuild projects
- Ability to solve complex engineering issues in consultation with staff
- Reviews work prepared by planning and field engineers
- Checks job information for completeness and reviews calculations of designs
- Prepares and maintains budgets and schedules and supervises administrative functions pertaining to jobs in progress
- Provides engineering services to other departments as required
- Coordinates the activities of project engineers, naval architects, and production personnel
- Discusses proposed changes or additions with customers during job progression
- Work with senior management to improve operational efficiency of the yard

Desired skills and experience

- Degree in Naval Architecture
- 10+ years of experience with fabrication / ship building
- Experience building PSV / OSV / AHTS vessels is preferred
- Proven ability to manage multiple projects
- Solid IT skills – Primavera experience is a plus
