

Project Manager - Shipyard - Seattle, WA

Our client is working on some great ship construction projects. They are currently looking for Project Managers with ship construction experience across various vessel types.

Job Description:

The Project Manager will have the full authority of assigned ship projects, including oversight of the following:

- Plan, estimate, negotiate and direct the work for assigned projects
- Ensure customer satisfaction and quality assurance requirements
- Work with scheduling and estimation departments to manage the project planning
- Manage logistics of assigned projects
- Manage a safe work environment - implementing health and safety rules/requirements
- Coordinate production activities with various departments and suppliers
- Review technical specifications and changes
- Supervision of subordinate managers

Preferred Qualifications:

- University degree in relevant field
- Strong knowledge of ship systems and ship building
- Familiarity with Primavera 6 and MS Project is required
- 5+ years of experience with ship build or work experience with maritime project management
- Experience with the staffing, planning, coordinating, and execution of extensive, labor-intensive, multi-dimensional project.
