JOB DESCRIPTION: Liquid Operations Analyst

Title:

Liquid Operations Analyst

Company:

Maloney Commodity Services is a privately owned international company with over 50 years of expertise in the verification and certification of physical commodities traded internationally. Active in commodities that range from agricultural softs to fats & oils, we are called upon to protect the interests of clients that include international commodity trade houses, banks, producers and end-users in countries that reach from our core operations throughout the United States and Latin America to countries such as Thailand and the Philippines.

Candidate Profile:

Seeking candidates that are driven, detail-oriented individuals that have demonstrated ability to perform effectively within a team framework and are willing to embrace the challenges presented by the ever-dynamic international industry of physical commodities. Maritime graduates and/or candidates with vessel and/or terminal experience are preferred.

Specific Qualifications Required:

- Excellent academic record
- Strong consideration to be given to the following majors and/or focuses of study: International Studies, Economics, Business, Maritime, English, and Engineering
- Demonstrated leadership qualities within a team framework
- Strong written and verbal communication skills
- Some travel required
- Spanish is a strong plus

Position Description:

The Liquid Operations Analyst role is tasked with the day-to-day management of multiple projects that will require direct communication with our clients (as well ship brokers, agents and other parties in the supply chain), tracking vessels, coordinating resources and communicating with field personnel. Timely completion and issuance of summary reports, certificates, and communiqués will also be required. The Analyst will have daily access to our firm’s management that has expert knowledge of the industry and will be presented the opportunity, based on performance, to earn the rapid expansion of responsibilities – the core of which will be to (1) develop an in-depth understanding of the terminals we operate in, (2) coordinate closely with our team of personnel that perform our survey work, and (3) become well-schooled in the measurement determinations behind their surveys.
